Biochemical Pharmacology provides a forum for the publication of original research papers, short communications, rapid communications and invited commentaries. The journal is devoted to research into the development of biologically active substances and their modes of action at the biochemical and subcellular levels. It reports on studies on all types of cells - plant, microorganism and animal - where emphasis is placed on biochemical pharmacology, including chemotherapy. New information is also conveyed on all phases of pure and applied cellular and molecular pharmacology, including organochemical, physiochemical, biochemical and cytological research.
